Introduction

Thank you for purchasing a MacWireless PCI USB Card. This card works with all computer models with an available PCI slot running Mac OS 10.2.8 or higher. No software installation is necessary, as all the necessary drivers are included in the operating system. Please see below for instructions on how to set up your card.

Features

- Supports all USB-Compliant devices.
- No third party software installation, it works with Apple's USB drivers.
- Supports all USB 2.0/1.1/1.0 devices.
- Data transfer rates 480/12/1.5 Mbps
- Compliant with Open Host Controller Interface (OHCI)
- Compliant to PCI Specification v2.1
- Supports Up to 127 Devices
- Supports Device Hot-Swap and Plug & Play

Installation

1. Turn your desktop Macintosh off.
2. Locate an available PCI card slot and remove the metal slot cover.
3. Handling the PCI card by its edges, insert it completely into the PCI slot and secure it in place using the original screws. Confirm that the card is well seated and even in the PCI slot.
4. Close the computer and power it on.
