## Introduction

Thank you for purchasing a MacWireless Power over Ethernet (PoE) Switch. The PoE switch allows you to power up to four PoE devices from a single unit. There is a total eight Ethernet ports on the switch. Ports one thru four are PoE-enabled, and ports five through eight may be used for additional non-PoE devices.

## Installation

1. To connect a PoE-enabled device to the switch, run an Ethernet cable from port one, two, three, or four on the switch to the Ethernet port on your POE-enabled device.
2. To connect a device that is not PoE-enabled, run an Ethernet cable from any Ethernet port on the switch to your device.
3. Find the provided power cable and plug it into a wall outlet.
4. Installation is complete.
